SPECIAL REPORT

JUNE 2019

Welcome to *A World Of Risk*, the Chartered Insurance Institute's Special Report on building a trusted international insurance profession.

Insurance was one of the first professional disciplines to operate across national borders, driven by the growth in international trade in the 17th century. As entrepreneurs explored new markets, transporting highly valued cargo on oceangoing vessels, they faced multiple risks. Edward Lloyd's famous coffee house became an indispensable meeting place for traders to connect with those who had the means and will to underwrite their adventures.

Today, insurance is firmly established as an essential sector within the global economy, employing an estimated three million people worldwide, and there are many researchers who provide valuable information on its size and scale as a business. This Special Report has a different perspective and focuses on the world of insurance as a *profession*, exhibiting the characteristics of other established professions such as medicine, the law, accountancy and surveying – all of which derive their legitimacy from serving the public and earning the public's trust.

The report is organised in two parts. Firstly, you'll find a range of Special Features on topical matters facing the international insurance profession, such as the impact of big data, and embedding standards across borders. Secondly, we've included one-page Country Profiles, showcasing the development of the profession in every territory where the CII has an affiliated institute. We are grateful to all the contributors for kindly giving their time, insights and expertise to support this publication, in a spirit of engagement and collaboration.

We would be most grateful for any comments or feedback on this inaugural Special Report.

If you have a contact within the CII, please don't hesitate to provide your views directly to them; otherwise, you're welcome to email us at: aworldofrisk@cii.co.uk.

TRUST

A TRUSTED INTERNATIONAL PROFESSION

by Sian Fisher ACII
Chartered Insurance Practitioner
Chief Executive Officer, Chartered Insurance Institute

Einstein once wrote: “Whoever is careless with the truth in small matters cannot be trusted with important matters.” As insurance professionals, we are entrusted with some of the most important matters of all – such as financial wellbeing in retirement, peace of mind in the face of life’s unforeseen events, and confidence for companies that are taking risks, creating jobs and innovating. A world without insurance would be a truly terrifying place for individuals, families and businesses.

In this Special Report, you’ll find examples of the activity underway in all corners of the world to build public trust in insurance. This includes inspirational work to increase insurance accessibility in emerging markets, the development of insurance solutions to promote environmental protection, the creation of knowledge-based partnerships, and innovations to serve customers in a more joined-up manner. The Report also highlights the work in two particular areas – Ghana and China’s Greater Bay Area – where fascinating initiatives are visible.

MEASURING TRUST

Over the past two years, the CII has spearheaded a number of initiatives to understand and define how trust arises when customers engage with our profession. If our profession cannot justify the trust of our customers in simple, everyday matters – such as clear policy wording, or the fair application of a ‘no-claims bonus’ discount – how can we expect the public to trust us with the more formidable challenge of enabling them to live financially resilient lives?

So far, our focus in this field has included:

- Working with academics who specialise in the psychology of trust as they turn their expertise to the world of insurance. In her report *Public Trust In Insurance for the CII*, Dr Katherine Hawley from St Andrews University observed: “Learning to trust wisely is a crucial life skill. When we trust, we expect both competence and basic goodwill, since neither alone will get the job done ... Insurance providers may face special challenges in evidencing their competence.”
- In-depth research, supported by The Institute of Customer Service, to pinpoint “what really matters” in the nurturing of trust in insurance among consumers and small and medium-sized firms. This has highlighted nine factors, set out in our publication *Public Trust In Insurance: Opinion Survey* – such as Ease (“It’s easy to get the protection I need”), and Respect (“Trust me and treat me in a human way”). It also suggested a roadmap for the profession by showing which of these nine factors is in need of urgent action and proposing practical measures that supportive firms can undertake.

During the past two years, the CII has spearheaded a number of initiatives to understand how trust is built when customers engage with our profession

This pioneering work enabled us to launch the CII's Trust Index in 2018. This will be used to track the progress of our profession, year on year, in tackling many of the priorities that the research unearthed.

TRUST WITHOUT BORDERS

We are living in the first generation when trust must be earned – and can easily be lost – on a global basis. Social media has no boundaries. The five countries with the largest number of Facebook users are India (294 million), the United States (204 million), Indonesia (131 million), Brazil (129 million) and Mexico (84 million). China has more registered LinkedIn users (44 million) than any other country except for the US and India. The interconnectedness of the world's population means that customers can share their experiences, good and ill, with thousands of followers in a matter of moments.

For the insurance profession, placing a priority on trust means taking a global perspective. It will be impractical to operate in different markets with inconsistent, incompatible policies, practices and standards. There will be no point delighting customers in one hemisphere if people on the other side of the planet are 'going viral' with their disapproval. Trust cannot be fragmented. In an era of globalisation, interconnectedness is key to our shared vision of fairness.

FOSTERING TRUST AS A UNITED PROFESSION

In my time as CEO, I've had the good fortune to visit many of the markets where we have an affiliated institute and spoken with many colleagues and partner firms about practical measures we can all take to strengthen public trust. Examples that have been shared with me include:

- The development of products and services that address areas of growing concern, such as cyber risk
- Gathering insight into the needs, requirements and behaviours of customers in order to serve them better
- Imaginative use of new digital channels and media to bring the benefits of personal lines insurance to people in emerging markets
- Collaborating with professionals in other sectors on risk mitigation and risk transfer.

This experience has reinforced my view that trust is only sustainable when it rests on the twin foundations of competence and fairness, and I'm proud of the work of the CII's many partners to promote not only technical knowledge but encourage and embed attitudes and behaviours through application of our Code of Ethics.

This publication showcases many examples of best practice, from all corners of the world. None of us has a monopoly on wisdom – and that's a reason for celebration, since it should spur us on towards closer collaboration.

I hope you enjoy the following articles as we continue to work together for a fairer future for all. ▲

BUILDING TRUST: CUSTOMERS

SERVING CUSTOMERS ACROSS BORDER

by Shankar Garigiparthi MBA, CIRM, Int Dip (AML)
Country Manager and CEO, India, Lloyd's

Borders are vanishing. One of the clearest messages I receive from Lloyd's customers is that, when they engage with one of our regional offices, they must have confidence that they can count on the combined expertise of the Lloyd's market across the region – and receive a consistent and seamless core 'customer experience'.

Since a rapidly increasing number of customers seek to engage with Lloyd's in multiple markets, addressing this issue has become a critical business priority. In the past six years, we have welcomed new syndicates supported by capital from China, India, Korea, the Middle East, Mexico and Taiwan - gaining 95 new Lloyd's brokers, 42 of which are international.

RESPONDING TO OUR CUSTOMERS

At the same time, while Lloyd's used to be the go-to place for certain types of specialist insurance, buyers now have a lot more choice as centres all over the world have emerged. Three centuries ago, Lloyd's was virtually synonymous with marine risks, but now Asia marine risks don't have to go through London at all. In response, Lloyd's has internationalised and set up a footprint ready to tap into high-growth markets, such as in Asia.

In February 2018, we announced a new regional structure combining the Asia-Pacific and China regions. The new structure will create a platform for collaboration across the regions, leveraging resources to create efficiencies, business opportunities and improvements in how Lloyd's interacts with the market.

In addition to our structure, our business model and service delivery processes must adapt to the rising expectations of cross-border customers. The market expects – and sometimes demands – that Lloyd's offices cooperate seamlessly. The advent of the Belt and Road Initiative (BRI) and the multi-regional nature of accompanying infrastructure investment and development, has led Lloyd's Asia and Lloyd's China to work together more closely in positioning Lloyd's as the market of choice for specialist BRI risks among governments, risk managers, corporates, banks and brokers.

Innovation is an integral part of how the Lloyd's market works and one of our most significant recent undertakings has been the digital transformation of the market. This enables electronic placement, moving away from the traditional 'pen and paper'-based ways of working. More broadly, last year we

launched the Lloyd's Lab, a fast-track, fast-fail environment where new concepts, ideas and products can be tested with the support and active involvement of the world's specialist insurance marketplace.

The Lab's main focus will be predominantly to design technology-driven solutions to meet the unique and rapidly changing needs of the international market. From the Lloyd's Lab, we've benefited from great new companies such as DropIn – which provides an on-demand live video-streaming platform to streamline insurance inspections and catastrophe response assessment, using mobile phones and drones. To date, DropIn has been used to great effect in helping facilitate insurance claims in the US, with the Californian wildfires and Hurricane Florence in North and South Carolina.

USING OUR GLOBAL PRESENCE TO TURBO-CHARGE INNOVATION

We cannot be reliant on one location for customer-focused innovation. Outside London, our global presence enables us to nurture ideas from a vast range of sources that enhance the customer experience.

In Asia-Pacific, we have successfully piloted a new digital distribution platform in Australia – Lloyd's' Bridge. This platform is designed quickly, easily and efficiently to connect insurance businesses and entrepreneurs with Lloyd's underwriters. Lloyd's Bridge will enable coverholders in different parts of the world to benefit from easier access to Lloyd's expertise, underwriting talent, significant capacity and financial security. We are looking to extend access to more markets in 2019.

Last year we commissioned and produced a report exploring crop (re)insurance risk in India, helping insurers improve their portfolio exposure management, gain an appropriate understanding and have the confidence to expand into this fast-growing market.

The world's first commercial cyber risk pool was also established in Singapore through the Cyber Risk Management (CyRiM) project last year, of which Lloyd's is one of the founding members. In 2018, Lloyd's Asia signed a landmark memorandum of understanding with the Intellectual Property Office of Singapore, to introduce new intellectual property insurance products that will help develop the country as an intellectual property innovation hub. These are a few examples of the creativity and innovation that is taking place for Lloyd's all over the world.

LOOKING AHEAD

During the next few years, Lloyd's will continue to modernise, innovate and be the essential and specialist reinsurance market in the world.

The expectations of our customers – especially cross-border customers – will never reach a plateau, and every year we must seek opportunities to refresh how we do business.

New borders and opportunities will open, technology will continue to change the face of our industry and global geopolitics may descend into an even more complex and uncertain environment. What will not change is the unwavering commitment to service and claims excellence from Lloyd's that has served this organisation since its humble beginnings as a 17th century coffee house in London. ▲

BUILDING TRUST: PARTNERSHIPS

HOW KNOWLEDGE-BASED PARTNERSHIPS CAN STRENGTHEN MARKETS AND DELIVER VALUE

by **Walter Jopp** BA (Hons)
Chief Executive Officer, Zurich Middle East

Imeet regularly with financial advisory firms and banks about the opportunities and challenges facing their businesses. Many of our conversations start with discussions about their aspirations for their business, the culture they are building and their employees. Central to these meetings has been the area of building a long-term business advantage through upskilling.

As insurance and financial services providers continue to grow and invest in the Middle East, there is increasing demand for professional qualifications, training and ongoing knowledge-based development in the region. At Zurich, we take professional development seriously and it is our duty to provide practical support for our distribution partners to compete as industry leaders.

A KNOWLEDGE EDGE

This is not a box-ticking exercise. If you don't complete and commit to continuing professional development, you will struggle to maintain your competitive advantage.

With the onus increasingly on individuals to make provisions for their long-term savings, it is vital for the industry to make a strong case for people to seek financial advice. Financial advisers do not simply advise on the most suitable financial solutions for their clients, they also provide invaluable ongoing support and counsel – the behavioural 'alpha' it has been termed previously by asset managers. However, like other forms of professional advice, such as from solicitors or accountants, we need to clearly demonstrate that it is well worth paying for.

If you don't commit to **continuing professional development**, you will struggle to maintain your competitive advantage

KNOWLEDGE IS POWER

We support our distributors to complete qualifications with, and become members of, both the Chartered Insurance Institute (CII) and the Chartered Investment and Securities Institute (CISI). For example we sponsored 350 advisers in the region in 2018 alone.

This has been in parallel to sponsoring our full relationship management team, more than 40 employees, to Level 3 or Certificate level. While some will continue on to Level 4 or Diploma level, our goal was to have the most qualified relationship management team in the region.

Our support goes beyond frontline distribution. Steven Leech, Head of Propositions at Zurich Middle East, is currently studying for his CII Diploma and believes that “through studying with the CII, someone not in a customer-facing role can develop a better appreciation of the demands on the adviser and the needs of the customer”.

HOW TECHNOLOGY IMPACTS THIS LANDSCAPE

Changes in technology, investing and client demographics are bringing about a new age of advice. As an adviser, you need to thrive in this new environment. With technology taking over some of the analysis and heavy data-lifting of the advice process, a clear competitive advantage is going to be more important than ever and arguably harder to maintain. This may come down to ‘old fashioned’ well-developed personal skills. Clients working with a financial adviser often have a greater sense of confidence, more certainty about their ability to retire comfortably and have higher levels of funds put aside for an emergency.

THE HUMAN VALUE OF ADVICE

Receiving quality financial advice pays a dividend that builds both wealth and confidence. A competent financial guide can help customers achieve the returns necessary to arrive at their financial destination, while simultaneously improving the quality of their journey.

When we look at how customers engage with financial advisers, the most powerful motivation for initially seeking professional advice is a recognition by an individual of the limits of their own understanding of a particular financial concern, often when that concern becomes pressing.

I think everyone should have access to a financial professional to help them achieve their financial goals. The most effective advisers will be those that combine technical knowhow secured through qualifications, with technology to support the advice process – all complemented by the empathy and ability to truly advise on pressing and personal financial concerns. ▲

THE GREATER BAY AREA, CHINA

by **Benjamin Chang** CIP, ACII, MBA
*Regional Managing Director, Global Client Network, Asia
Aon*

THE OPPORTUNITY

China's Greater Bay Area is a thriving economic metropolitan region around the Pearl River Delta, comprising 11 cities of the Guangdong Province – Guangzhou, Foshan, Huizhou, Dongguan, Jiangmen, Shenzhen, Zhaoqing, Zhongshan, Zhuhai – and the two special administrative zones, Hong Kong and Macau. Colloquially known as the 9+2 region, its economic strength is formidable – the combined GDP exceeds \$1.4trn, which means that, if it was a stand-alone country, it would rank alongside South Korea – comfortably one of the largest 15 economies in the world. In a recent PWC report, it was forecast to surpass the economic size of the Tokyo Bay Area and the New York Bay Area by 2030, “to become the world's largest bay in terms of economic scale”.

With a population of 66 million, continued economic development will be heavily dependent on a strong and sustainable insurance sector, providing financial security for individuals, families and businesses. The authorities throughout the region support increased cooperation across many policy areas. A ‘Framework Agreement of Deepening Zhongshan – Hong Kong – Macau Cooperation’ was signed in 2017, and a vast investment programme is underway to upgrade transportation between the cities. When this is complete, the entire population will be connected within a “90-minute living circle”.

A RISING NEED

A thriving and professional insurance sector will help to embed economic prosperity, giving greater confidence to businesses that are starting out or expanding, and providing security to a fast-emerging middle class with assets that need financial protection. This has been confirmed in a recent paper prepared by the China Government, entitled *The Greater Bay Area*, which advocated the key strategy of “expediting the development of modern service industries”, and in particular:

“To progressively promote mutual financial markets access... subject to compliance with laws and regulations, to progressively promote cross-border transactions of financial products such as funds and insurance.”

In 2019, risk management in Hong Kong is a sophisticated, mature discipline, and has been a vital component in the city's emergence as a financial centre in Asia. However, the same standard of risk management is not yet commonplace elsewhere within the region. The insurance profession needs to rise to the challenge, in order to fulfil its role as an enabler of economic growth and the emergence of the Greater Bay Area on the world stage.

To progressively promote mutual financial markets access... subject to compliance with laws and regulations, to progressively promote cross-border transactions of financial products such as funds and insurance

AN INNOVATIVE SOLUTION

There is now a pioneering initiative to allow authorised insurance companies to sell designated individual medical polices and critical illness insurance through digital platforms and online distribution channels. With this in mind, activity is at an advanced stage to launch 'Health Insurance Connect', whereby residents throughout the 9+2 region can purchase cover from Hong Kong insurers (two-way distribution is envisaged at a later stage). A designated portal will provide consumers with information about products and providers, before directing them to a website where the application process can commence. Claims and claim settlement will also be processed through the e-platform.

THE BENEFITS

One of the key features of the solution is that it's industry-wide. Assuming the pilot is successful in the delivery of highly valued services to the public, the benefits will be widespread:

-  Strengthen business interaction
-  Promote the mobility of the population
-  Align with the overall insurtech direction
-  Build confidence through a single platform and reputable platform manager

The roadmap to deliver this ambitious vision consists of four key phases. Drafting involves an MOU between the regulators involved, so the legal and regulatory framework is clear and a reputable organisation is appointed to run the platform. This will be followed by a pilot phase, mid-term assessment, and full application. By this point, we anticipate expanding the platform beyond the Greater Bay Area, and streamlining the entry requirements for Hong Kong insurers offering services on the mainland.

An exact date for launch is under discussion at the time of writing, but the expectation is for this concept to be brought to market by early 2020 at the latest.

-  Create an audit trail for capital flows
-  Offer free-of-charge access for the insured to mediation and arbitration services
-  Enable data privacy due to the protection of the Hong Kong Personal Data (Privacy) Ordinance

The entire insurance profession is working closely alongside policymakers to help realise the aspirations of the China Government, building trust among communities and stakeholders throughout the Greater Bay Area. By doing so, insurance is playing a key role in maximising business opportunities and fuelling growth in the region. ▲

BUILDING TRUST: MEMBERSHIP

A PROFILE OF THE CII'S INTERNATIONAL MEMBERSHIP

by **Ian Simons** ACII, MCIM
Chartered Insurance Practitioner
*Marketing Director, Chartered
Insurance Institute*

and **Vanessa Riboloni**
MMRS
*Insight Manager, Chartered
Insurance Institute*

Insurance and personal finance are increasingly globalised sectors, and the CII's membership has always reflected this.

Today, more than 13,000 members (more than 10% of the total) are based overseas, with the largest concentrations in Hong Kong (1,389), Ireland (1,323) and the United Arab Emirates (981). But the significance of our presence outside the UK extends far beyond the raw numbers. Our international members are valued partners in our journey to building a trusted profession through raised standards. And of course, we recognise we are part of a family of professional and membership bodies pursuing common goals. As part of our inaugural international publication, we have undertaken a review of the profile of our international membership and highlight some of the issues that are important to them:

- **Age:** On average, our overseas members are older than our UK members. This is primarily caused by the greater weighting of members under the age of 24 in the UK (12% versus 4%).

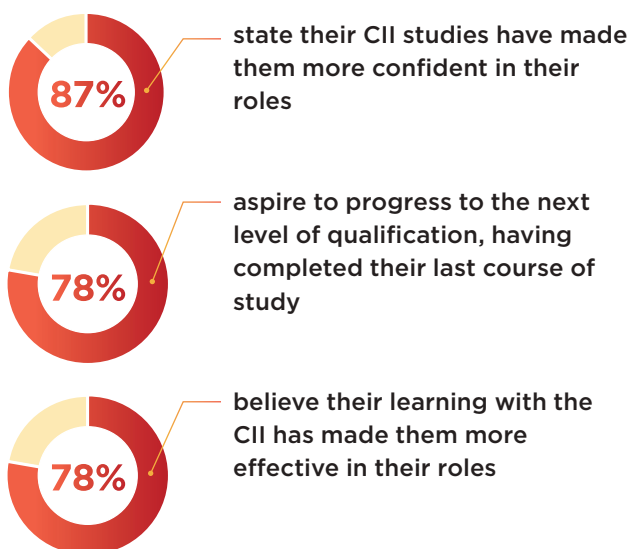

- **Employment status:** International members are slightly more likely to be in full-time employment (87% versus 84%) or self-employed (6% versus 4%); the difference is attributed to the greater proportion who job share or work part-time in the UK. Drilling into the types of employers, our international members are considerably more likely to work for reinsurance brokers (9%) than in the UK (3%).
- **Size of employers:** Our UK members are far more likely to work for large-scale employers – just 22% of international members are employed by firms with more than 1,000 staff. The comparable figure in the UK is 42%.
- **Role:** The largest single category of role among our international members is 'underwriter', accounting for 32% of all respondents (18% in the UK). Another material difference is sales and marketing, which accounts for 10% of our non-UK members (6% in the UK).
- **Ambitions with the CII:** A remarkable 26% of international members aspire to Fellowship within the CII (10% in the UK). Already, 3,942 have achieved Chartered status, and we look forward to celebrating our 4,000th international Chartered member in the near future.
- **The value of CII membership:** The most common single reason cited by international members for being a CII member is that it "strengthens professional credibility"; in the UK, this ranks as the third most popular response (behind "studying for a qualification" and "my employer enrolled me").

WHAT MOTIVATED YOU TO STUDY WITH THE CII? (RESPONSES FROM CII INTERNATIONAL MEMBERS)

- **Social media:** Our social media activity on Twitter and LinkedIn is valued by all our members but in particular by those overseas – they are three times more likely to rate it as ‘essential’, and also more likely to say it’s ‘very’ or ‘moderately’ important.

A core element of the CII’s Strategic Manifesto and Transformation Programme has been to step up our investment in supporting a trusted profession beyond the UK’s shores. For this reason, we have also been eager to understand the attitudes of international members towards our learning materials and services, and in late 2018 we ran a survey to gauge where our focus should lie. Among the key findings to emerge were that, for international members:

International members are more likely than UK colleagues to highly value certain elements of our learning proposition, for example our qualification brochures, the qualification section of our website, advice and support from our Customer Service team, our study pathways and our learning materials. This is partly attributable to the fact that they are less likely to work for large organisations that provide centralised HR support on such topics. However, they are also less likely than UK members to value our RevisionMate tool, which is a clear ‘call to action’ for us to ensure our international content is relevant and accessible – colleagues from the CII’s Learning and Assessment team provide more details of our plans elsewhere in this publication. Unsurprisingly, they are also far more likely to express interest in the CII “providing more products and services overseas” (54% versus 3%). You can rest assured this is a high priority for David Thompson, our International Director, during the coming months!

Finally, we have explored the motivations among members to study with the CII. Internationally, the most commonly cited reasons are: to improve my knowledge and skillset, to improve my career prospects, and a desire for personal development and achievement (please see the full range of responses presented in the chart at the top of this page).

During the decade ahead, as customer expectations soar and the choice of insurance solutions grows, knowledge and skills will be a vital component in earning and maintaining trust. We are excited to be a part of supporting practitioners on their learning journey, wherever they may be. ▲

THE VITAL ROLE OF UNIVERSITIES AND COLLEGES

by **Karine Kam**

B Soc Sc (Hons) Econ, BA, MA in Ed (HRD), Asia-Pacific EMBA, ACTA

Chief Executive, Singapore College of Insurance

Universities and colleges around the world are beginning to realise and understand the paramount importance of honing the development of young and talented prospective graduates that come through their door and nurturing them to be effective contributors to the workplace. Providing support and increased opportunities in their study journey would catapult their development to an even higher level, if not quicker.

Be it through short-term mentoring, industry internships, or even on-the-job training, acquiring the necessary job skills and expertise for their respective industries will allow students to be in the driving seat of attaining career success in the distant future. The transition from university studies to a career should be one seamless journey for the students. Having said that, university education should not be seen as an end in itself but a continuous activity - and not just be confined to the university-going years of its students.

It is vital for tertiary institutions to understand that in providing workplace experience(s) and job role exposure, one lays the foundation in nurturing a talented individual. It facilitates the individual's

personal growth and enables them to be marketable to prospective employers. Universities and colleges have the responsibility to support their students' passion for their subjects of interest by enabling knowledge-based interactive learning. Otherwise, mundane delivery of learning subjects will cause students to lose interest rapidly. Given the plethora of learning opportunities made available by technology, universities could leverage them and shorten the contact hours, freeing time for students to pursue a broader and higher level of education.

The insurance profession is generally viewed as an attractive area to prospective graduates and intriguing to those who are already in the industry. Therefore, employers and educational institutions need to tap into this opportunity of finding a solution to broaden the knowledge of the young population as a whole - in particular, university-bound high school students and the students in business schools. Young talent can be taught to understand how the industry contributes to the society and economy. They can be made to feel excited about the challenging and fulfilling job roles that exist in the insurance profession.

One should seek **progressive learning** and be a mentor to many

As part of an initiative to attract and nurture young talent for the insurance industry, the Singapore College of Insurance's (SCI) flagship Insurance Management Associate Programme (iMAP) develops young talent to be job-ready for specialist and leadership roles in this dynamic industry. Launched in 2009, it is a structured two-year fast track talent programme that offers participants professional accreditation and certifications, structured on-the-job training coupled with cross-functional rotations, mentorship, international exposure and an online ethics programme. iMAP also provides structured post-programme career development with a view to leadership.

To date, SCI has trained and developed a total of 232 talented young individuals for the industry. SCI has also prepared these young talents for greater challenges in the years to come. The iMAP enables young candidates to be identified for potential leadership roles. Through the iMAP, these future leaders can be further mentored and sent on leadership training courses to further their development. In turn, this develops a pool of top-notch mentors for future prospective talent.

In this day and age, insurance courses are also no longer marketed as merely 'insurance courses'. At the recent World Economic Forum on ASEAN 2018, the Industrial Revolution 4.0 was discussed and it further emphasised how technology will continue to impact current and future jobs. Insurance courses are now being structured to incorporate insurtech-related related learning modules. Professionals need to adapt and be of relevance in the light of such technological developments and disruptions. Merely attending courses on the technical aspects of insurance is no longer adequate.

Higher education is now facing changes and headwinds it has never faced before. It is no longer enough to just enrol for a three- or four-year programme in universities or colleges. Graduates have to ask themselves: "How well will I equip myself for the future?" and "What's in it for me now?". Nonetheless, degrees and higher education will continue to be of demand due to their capability of providing some form of credibility in the hiring process - managers and employers use education as a gauge for one's performance level(s). But whether this continues to remain valid is something that only time will tell.

Therefore, both students and tertiary institutions have to prepare and equip themselves, and never stop adapting to change. There is a need to be relevant - if not indispensable. One should seek progressive learning and be a mentor to many. The insurance industry will continue to face its fair share of challenges, be it on the talent development or economic front. Likewise, these changes will also present opportunities for the insurance industry. If we are all prepared to adapt and innovate, the best is yet to come. ▲

BUILDING TRUST: MICROINSURANCE

INSURANCE ACCESSIBILITY IN EMERGING MARKETS

by Richard Leftley

Chief Executive Officer, MicroEnsure Holdings

Insurance is sometimes portrayed as being a bit boring, but can you name a developed economy that does not have a well-developed insurance market? It's an essential component of any functioning and developed economy, because it allows risk to be shared across society rather than being shouldered by the individual.

THE CHALLENGE IN DEVELOPING MARKETS

Ironically, those who have relatively little face significantly higher levels of risk than the rich – they live in poorly constructed houses in areas more exposed to natural disasters, their lack of nutrition and lack of access to clean water makes them more susceptible to outbreaks of disease, and in a world of changing climate they are increasingly exposed to severe weather-related risks too. Without insurance, the poor will slip further into poverty as they are forced to use meagre savings to pay for unexpected events to which they are uniquely vulnerable. If we fail to address this lack of access to insurance, then gains garnered through other forms of development work will be lost when disaster strikes.

Throughout emerging markets, insurance penetration is limited to between 1% and 5% of the population - leaving 95% to 99%, or an estimated four billion people, without a safety net and susceptible to being forced back into poverty following an unforeseen event. Traditional insurance companies have been active in these markets for many decades, yet they have failed to reach beyond the very richest individuals and the large corporations; the typical person on the street has no access to the benefits of insurance.

MICROINSURANCE: THE ESSENTIALS

My experience is that these people can be reached through combining a specialist focus on microinsurance with partners who have scale. Sixty million people in Africa and Asia have been newly served in recent years – and these are people who otherwise would have had no insurance cover. The key lessons learned have been:

To design simplified insurance products that can be explained in a single text message.

To strip out all the exclusions and conditions, making the products easy to understand and use.

To make the customer journey frictionless through a digital approach; buying insurance should be as easy as buying a ringtone, and getting a claim paid should not require you to leave home and you should get paid within 72 hours.

Partnership requires organisations that can distribute products, such as microfinance companies, banks, mobile networks, e-commerce companies and logistics firms – companies that are already used and trusted by the population concerned. Strong partners can also be insurers who have traditionally been reluctant to cover the low- and middle-income sectors in certain countries until they are persuaded that a viable market exists.

My experience is that the best way to educate users about the benefits of insurance is to encourage them to use the product and see members of their community get claims paid quickly and easily

LOOKING AHEAD

No-one wakes up wanting to buy insurance and if you are economically disadvantaged you have many other uses for your limited family budget, so microinsurance, is a product that needs to be sold. A key success factor for microinsurance is to embrace this distribution challenge head on. My experience is that the best way to educate users about the benefits of insurance is to encourage them to use the product and see members of their community get claims paid quickly and easily.

An innovative approach is to find a commercially sustainable way for large companies such as telcos to give away insurance for a limited time free of

charge. In many instances, telcos have an issue with customer loyalty as low-income people have multiple SIM cards and spread their airtime top-up across multiple networks. By offering insurance in return for loyalty, the consumer was able to address the risks they woke up worrying about and the telco saw an increase in its average revenue per user. Once people have free insurance and experience how the product works, it's possible to establish outbound call centres that offer additional coverage where the need exists.

The result is a new market that insurers were not previously interested in serving, and low-income families no longer at risk of being wiped out financially by the slightest setback. ▲

BUILDING TRUST: LONG TERM

PLANNING FOR THE LONG-TERM: THE CII'S INTERNATIONAL STRATEGY

by **Keith Richards**
*Managing Director - Engagement,
Chartered Insurance Institute; Chief
Executive Officer, Personal Finance
Society*

and **David Thompson**
*International Director,
Chartered Insurance
Institute*

With more than 12,000 members of the Chartered Insurance Institute and the Personal Finance Society already operating around the world, coupled with some longstanding and newly developed professional partner collaborations, we are committed to enhancing our support and broader engagement in key regions. The drive to raise professional standards and improve consumer trust in financial services more widely across the world, represents a significant business opportunity for a 'united profession' to make a difference to people.

The CII's longest-established international team operates from our office in Mumbai and is led by Regional Director Sainesh Dar, who joined the CII in 2007, covering all south Asia relationships. A second regional base was established in Hong Kong in 2016 and is led by Regional Director Kenny Siu, covering Asia-Pacific. Our newest office was established in Dubai at the end of 2018 and is led by Gaenor Jones, who was appointed Regional Director at the same time.

A strong global economy relies upon a robust financial services sector, operating to high standards to provide the confidence for the public to engage. The CII is actively working with governments, regulators, employers, educational institutions, affiliated institutes and many others across 150 countries.

PLANNING FOR THE LONG TERM

We recognise the need to evolve our role and purpose to be modern, relevant and diverse, and has fully committed investment and resources, regardless of geographical boundaries, to build credibility, value and reputation of CII's qualifications and services. As part of a Transformation Programme established in 2016, the CII executive allocated major investment in new technology, new learning content and wider modernisation.

As a public interest professional body, without the pressure from shareholders for instant results, the CII is able to plan and invest for the long term. Importantly, our Royal Charter means these results can take many different forms – not just financial. Trust in

As a public interest professional body, without the pressure from shareholders for instant results, the CII is able to plan and invest for the long term

the profession, the number of members, the lifelong progression of members from entry-level qualifications, and the engagement of members with professional matters – these are also all important metrics to which the CII and our Societies pay close attention.

WORKING WITH REGULATORS AND POLICYMAKERS

During the past decade, some of the CII's most powerful interventions have arisen from working closely with regulators in the UK and other parts of the world. In 2011, we supported India's Insurance Regulatory and Development Authority to upgrade the syllabus, course materials and question set for the IC33 – the mandatory qualification that needs to be passed by life insurance agents throughout the country. Our experience is that the best results arise when the regulator and the profession collaborate closely to a common goal. There is of course widespread recognition by regulators and others that standards aren't purely about technical knowledge and must be aligned to ethics and cultural conduct, which are equally at the heart of professionalism.

During the past few years, we have established other positive regulatory collaborations with the Insurance Authority of UAE, Insurance Authority of Hong Kong and the Saudi Arabian Monetary Authority.

The Personal Finance Society has additionally delivered joint consumer initiatives on behalf of the profession, with the Jersey Financial Services Commission, Isle of Man Financial Services Authority and the Guernsey Financial Services Commission, which demonstrate a new era for professional body and regulator collaboration.

ENSURING CONTENT IS RELEVANT TO LOCAL MARKETS

A vibrant international profession has true potential. The basics of ethical conduct apply across borders, and there are natural synergies and common objectives. On the other hand, each market is unique – differences may arise due to culture, insurance contract law, language and terminology, the historic development and structure of the sector, and many other factors. As we invest in our learning content, a core objective will be ensuring greater relevance to domestic markets in key regions – so that learners, regardless of where they live, can engage with our materials.

COMMITMENT TO INTERNATIONAL GROWTH AND DEVELOPMENT

Elsewhere in this publication, you'll find an article that sets out the CII's plans to deliver services digitally. This affects the spectrum of learning activity, from accessing content from the device of your choice, to the assessment of learning through remote invigilation.

Other priorities will include strengthening our partnerships with international associations, institutes and educational institutions, creating clearer pathways to support local qualifications.

In early 2019, a new International Engagement Group, chaired by Keith Richards, was set up to better coordinate our international operations and prioritise new developments – further demonstrating the Institute's commitment to a broader and more ambitious international engagement strategy. ▲

BUILDING TRUST: SOCIAL RELEVANCE

THREE DIMENSIONS: A NEW WORLD INSURANCE ORDER!

by Praveen Gupta FCII

Former Managing Director and Chief Executive Officer, Raheja QBE General Insurance

For someone who has been exploring the emerging fiduciary challenges of diversity and inclusivity to financial lines, the opportunity to outline my thoughts is serendipitous. My exploration of this topic intensified 10 years ago as I got onboard with the CII's Diversity Action Group, which considered how the case for diversity could be applied beyond gender alone.

We developed three dimensions: alongside diversity, there was a passion to deal with climate change before it became fashionable, and a fascination with the cyber world.

So let's navigate the future of our industry in terms of people, products and processes.

ANTHROPOCENTRISM IS ANTI-DIVERSITY

As humans we are prone to view and measure the amazing diversity around us in our own image, leading us to dominate all we can. We undermine ecocentrism and form exclusive silos. Polarised within these narrow bands, there is a crying need for inclusivity.

The milestones are not as hazy or distant as we often believe. In some jurisprudence there is already an acceptance to treat cetaceans and primates at par with homo sapiens. Ahead of that is a looming employment crisis arising from artificial intelligence and robotics. AI is very vulnerable to 'infective' human biases - how do we immunise against it, especially in the face of a talent crisis?

THE HANDMAIDEN'S WOES: STRANDED ASSETS!

There are clear signals that the exploitation of the environment by humans causes widespread ecological degradation and a diminished carrying capacity to sustain people, other species and the natural eco-

systems¹. Should insurers continue to support human enterprises that jeopardise the wellbeing of the planet?

Notwithstanding our expertise in pricing and managing complex risks, how can we be so shortsighted to invest surpluses into carbon-enhancing activities - and also insure them?

Noted author Amitav Ghosh (*The Great Derangement: Climate Change and the Unthinkable*) bemoans the lack of narrative. We should be the authority for building a compelling narrative on catastrophes triggered by 'act of God' perils. Regrettably, that is not how it proceeds, and it took a climate strike by school children like Greta Thunberg to wake up many lawmakers.

ENERGISING DIVERSITY BY CONVERGENCE

Participating in early warning protocols could benefit both insurers and society. For instance, the excessive use of ground water to boost cotton cultivation in Syria's Salamieh region resulted in a drought that drove hordes of economic refugees to cities; there, they were caught in a sociopolitical uprising that spiralled into devastating war. Close cooperation between agriculture and microinsurers would have set the alarms ringing for terrorism underwriters. We tend not to converge our separate insights to make meaningful forecasts.

THIRD POLE, TRIPLE BOTTOM LINE

A new world insurance order is emerging. The foundation is cyber; climate change is overarching and diversity is the centrepiece. This cannot be run the way it has thus far. While protectionism is eroding globalisation, other forces are nudging insurance into the global sphere.

Climate Change

This is not only universal, it is also cross-class. It impacts lives, health, assets and supply chains. It invokes intergenerational and transregion justice. The melting glaciers of the Hindu Kush region (termed the Third Pole) will impact the watersheds of the Ganges, the Brahmaputra, the Yellow River, the Irrawaddy and the Mekong - affecting multiple countries with close to a quarter of the world's population. "A new, highly complex and destabilised 'domain of risk' is emerging - which includes the risk of the collapse of key social and economic systems, at local and potentially even global levels," warns the Institute for Public Policy Research. "This new risk domain affects virtually all areas of policy and politics, and it is doubtful that societies ... are adequately prepared to manage this risk."

Until recently, most studies of environmental risk examined threats in isolation: climate scientists evaluated disruption to weather systems, biologists focused on ecosystem loss and economists calculated potential damages from storms and droughts. But a growing body of research is assessing how these factors create a tipping point in human society as well as the natural world.²

Cyber

This is also a universal, cross-class theme. How do you aggregate the overall exposure - as with climate change? Insurtech needs to clear away a lot of clutter before it raises the efficiency of our trade. US insurtech firm Lemonade has demonstrated how a rank outsider can disrupt us positively - while encouraging support for a favourite cause.

New metrics

These two forces are demolishing silos and 'horizontalising' our businesses, forcing us to redefine the

concept of risk, peril and hazard. How do we design our reinsurance, products and solutions? Where do we draw our talent from - human and otherwise? Extended stake holding has migrated governance into a new realm. We need to address conduct risk. The bean counters must reconcile with a triple bottom line.

IT IS NOT JUST ABOUT GENDER

During a CII D&I event in India in 2017, we gained a first-hand insight into the grassroot reality. 'Nanhi Kali' (literally 'little bud') reveals the extreme bias against young girls even before birth. Our explorations in north India revealed women leaders shunning a diversity study despite anonymity - and highlighted a lack of awareness of cyber risk and fiduciary risk transfer. Should we nurture our girls (and boys) on narratives from *Good Night Stories For Rebel Girls* (by Elena Favilli and Francesca Cavallo) - to rewire how the future generations think?

The insurance industry must come of age and no longer be the handmaiden of the industry. It must make conscious choices and celebrate diversity. The Asimovian interplay will soon transition fluidity beyond gender to the world of cyborgs. Sustainability should be core of all risk practices. As the new order emerges - and around it the people, products and processes - insurers should not attempt to block the forces that beckon a transformational new order. May the 'Nanhi Kali' blossom! ▲

GHANA

by **Rev. Asante Marfo-Ahenkora FCI**
Managing Director, Tri-Star Insurance Services
CII goodwill ambassador in Ghana

SPOTLIGHT ON GHANA

The Ghanaian insurance profession has evolved from the era when British traders dealt in arms and manufactured goods with the then Gold Coast; now Ghana. Companies like the United African Company (UAC), Swiss African Trading Company and others established branch offices in the west African colonial territories. The Royal Exchange Assurance Corporation began the business of insurance in the Gold Coast in 1924 and operated through Barclays Bank as its agent. This was followed by the Northern Assurance Company of Britain in 1936, which operated through the branch office of UAC.

On attainment of independence in 1957, the Ghanaian governments have - with the support of the United Nations Conference on Trade and Development - sought to encourage the indigenisation of the insurance profession.

Currently, the market has a mixture of foreign-owned and local-owned companies operating in both the general insurance (non-life) and life insurance segments.

There are two common measures that are usually used to assess the increasing significance of insurance to the economic development of a country and the wellbeing of its people: insurance penetration (the ratio of premium to the gross domestic product) and insurance coverage (the proportion of the population with insurance cover).

These two measures paint a different picture of the relevance of insurance in Ghana. While the insurance penetration rate is 1.2% as at the end of 2018, insurance coverage was 30%. This apparent disparity is due to the fact that many Ghanaians are covered by

microinsurance products, whose premiums are not significant enough to affect the insurance penetration rate.

STRUCTURE OF MARKET

At the apex of the market is the regulator, the National Insurance Commission, which regulates the licensing and operations of market players. It has lately initiated the process to introduce a new insurance law for promulgation as well as raising the minimum capital requirement for all new and existing companies.

At the end of 2018, there were more than 139 regulated entities made up of 24 life insurance companies, 29 non-life insurance companies, three reinsurance companies, 88 broking companies, and three insurance loss adjusters. There are numerous tied agents as well. This is a large number of players compared with the size of the market and indeed the entire economy.

The Ghana insurance industry's total assets grew from GHS5.4bn to GHS5.58bn - made up of GHS3.18bn in life sector, GHS2.16bn in the non-life sector and GHS240.1million in the reinsurance sector.¹

The industry employed about 12,500 people and also paid corporate taxes of about GHS50m to the government in 2018.

MARKET GROWTH

The Ghana insurance market has enjoyed steady growth in recent years, mainly driven by:

Improving economic conditions: According to the World Bank, the GDP per capita of Ghana has increased from \$1,312 in 2010 to \$1,707 in 2016. This

On independence in 1957, the governments have sought to encourage the **indigenisation** of the insurance profession

MARKET HISTORY

Note: Graph shows premiums in GHS billion

points to an increasingly affluent middle class – and a greater number of households that understand (and can afford) insurance.

A growing population: Ghana enjoys a relatively healthy population growth rate of 2.2%, and more than 50% of its people are aged under 25 years. This means that there are many tech-savvy individuals who can access insurance using non-traditional distribution channels.

Demand factors: In Ghana, all vehicles except government vehicles must be insured – and the usage of vehicles is increasing alongside population growth. The motor class of insurance is the leading contributor of insurance premiums in the general (non-life) segment, contributing 40% of the premiums for the sector. Another important issue is financial provision for the aged or pensioners. The breakdown in the external family system as well as the introduction of a ‘tiered pension scheme’ in Ghana offers an avenue for the insurance industry to offer annuities as a vehicle to cater for the financial wellbeing of retirees.

Urbanisation: There is a strong correlation between urbanisation and insurance. Urbanisation makes it easier for providers to reach a large part of the population. In addition, urban areas generally exhibit buoyant economic activity, which also stimulates the uptake of insurance. Urbanisation in Ghana has also been the catalyst for a growing number of medium-sized and small-scale enterprises.

Mobile phone penetration: Mobile phone penetration rate in Ghana is more than 100%. The growth experienced in microinsurance has been primarily driven by the use of mobile phones as a distribution channel, with a young, tech-savvy population com-

prising a fertile market for insurance products. The use of mobile phones and cyber technology also creates new risk factors, and there is a growing market for services such as cyber insurance.

CHALLENGES

However, challenges remain:

Public perception: While public perception is improving, the insurance sector is not viewed favourably by ordinary Ghanaians. Reasons that have been cited include delayed and inadequate claims payment, the inability of insurance agents to explain policy terms and conditions, and the excessive use of insurance jargon in documents such as policy statements.

Sustainable market: There are currently more than 50 direct insurers operating in Ghana. One of the consequences can be unrealistic and unsustainable pricing. This will need to be addressed to ensure the market is on a sustainable footing.

Customer orientation: Insurers need to work harder to understand their target market so that insurance products can be developed that meet needs. This requires more active research into customer needs that has been the case historically.

With a commitment to professionalise the Ghanaian market and implement practical solutions to challenges such as those identified, the insurance sector is well placed to play a vital role in the economic development of the country. ▲

BUILDING TRUST: STANDARDS

WHY INSURANCE STANDARDS DON'T STOP AT BORDERS

by **Melissa Collett**

Professional Standards Director, Chartered Insurance Institute

Professional standards in insurance have never been more important than they are today. As our lives grow more complex, individuals and businesses face a vast array of insurable risks, and the role of insurance becomes increasingly critical in enabling us to approach our daily activities with confidence and peace of mind.

If we consider established professions such as the law, medicine and accountancy, people will only engage with practitioners they believe will uphold the highest standards. Likewise, in insurance we must earn the public's trust in our adherence to standards – otherwise, they will turn their back on insurance solutions, or underinsure their risks, with results that can be damaging to individuals as well as society.

Professional standards come in many shapes and sizes, all generally rooted in three core principles:

- **Competence:** Having the right knowledge and skills to perform your role, and keeping those skills up to date
- **Integrity:** Operating honestly, openly and on the basis of strong moral principles
- **Duty of care:** Acting in the best interests of the customers, including those who are at risk of financial exclusion in a digital era where tools such as blockchain can potentially create outcasts.

ARE STANDARDS THE SAME THE WORLD OVER?

What's fascinating to me about these three principles is that, as I've visited a number of insurance markets in the past year, it's apparent that competence, integrity and a duty of care are universally valued. Regardless of geography, or cultural heritage, or the size and scale of the insurance sector, each of these principles is seen as highly desirable and relevant.

In my discussions, it's clear why this situation exists. Firstly, human nature doesn't fundamentally change at land and sea borders. In addition, the world of insurance is becoming increasingly global. Major carriers are rolling out products and services using their global platforms; risks are being priced using technology that processes data from many marketplaces; and the people who work in insurance are learning from one another through their participation in cross-border bodies such as the CII.

SPREADING BEST PRACTICE

It's essential to recognise that no one country, organisation or individual has a monopoly on wisdom when it comes to professional standards.

The CII's Code of Ethics shows how we've attempted to bring to life concepts such as 'integrity' and 'duty of care', with a series of practical case studies as well as a checklist of key points to bear in mind ("It's not

A universal feature of insurance is that, regardless of borders, it delivers social value

just about your legal obligations”; “It’s about upholding the spirit of the law, not just the letter of the law”; “It’s not just about the regulations.”)

However, many other respected organisations have explored different ways to make these principles relevant and real to practitioners. I am passionate about the need for all of us, regardless of location, to learn from one another in the search for best practice.

For this reason, I was delighted to speak with a colleague in Malaysia recently, who said: “Raising standards is a two-way process of sharing experience and judgment.” These remarks contain a wealth of commonsense insight, and over the years ahead I look forward to learning from Malaysian colleagues, as well as other colleagues around the world, to continuously improve the ways in which we specify, define and measure standards – especially as we hurtle towards a more digital insurance world.

FUTURE-PROOF YOUR CAREER?

Fundamentally, insurtech is about the automation of insurance, and automation will reduce costs. Blockchain consortium B3I predicts blockchain will reduce insurance processing costs by 30% in the next few years – which is great for consumers. But the cost savings will be at the expense of jobs.

So how do you future-proof your career? Throughout the world, institutes that are affiliated with the CII support professionals with lifelong learning, and provide a variety of services enabling their members to keep knowledge up to date.

DIGITAL ETHICS

Across the world, insurance has become digitalised at a dizzying speed. It’s been said that data is the

new oil – which means that insurers are like super-tankers, collecting vast amounts of data about customers that must be used responsibly. The insurance innovators that will be successful will be the ones that can persuade customers to trust them with their data. The international nature of insurance only amplifies the need for common standards among professionals, which is why we are developing a Code of Digital Ethics to complement its existing Code of Ethics.

A VISION FOR CHARTERED

I’d like to conclude by mentioning a specific example of how we can draw upon the wisdom throughout the world to enhance the practical application of standards. One of the privileges of the CII’s status is our ability to award Chartered status – both to individuals and to firms that meet specified standards.

But in a fast-changing world, the standards that were appropriate five, 10 or 20 years ago, may no longer be fit for purpose. During the past 12 months, we have consulted widely about the criteria and operations that apply to Chartered firms. But we are also refreshing our vision for what it means to be a Chartered professional. I’m determined that the meaning of ‘Chartered’ should resonate with consumers, regardless of whether they live in Manchester, Malawi or Mongolia. This will only happen if Chartered has a compelling message to people, regardless of gender, age or ethnicity, who purchase insurance.

A universal feature of insurance is that, regardless of borders, it delivers social value. So let’s harness the power of professionalism to drive up standards – to help meet the challenges of insurance in a disruptive era. ▲

BUILDING TRUST: ENVIRONMENT

GREEN INSURANCE

By **Raymond Ng**
*Underwriter, Swiss Re International
SE, Hong Kong branch*

and **Rory Thomson**
*Underwriting Assistant,
Swiss Re International
SE, Hong Kong Branch*

and **Dylan Bryant**
Director, CII Hong Kong

Anthropogenic climate change is a major risk to our planet, ecosystems and ultimately to our own existence. This has created a catalyst of change within the financial services sector. With banks and asset managers leading the way, green bonds, green banking and green loans have emerged in recent years. Our hope is that our insurance sector will support, complement and drive the change going forward.

Given the need for coordination between the banking and finance industries, and driven by the needs of our customers, the Hong Kong Green Finance Association's (HKGFA) Green Insurance Taskforce has developed a set of draft principles – principles that we hope will guide actions so that the insurance profession in Hong Kong and beyond can support businesses to meet their environmental, social and governance (ESG) requirements and the move towards a low-carbon economy. The principles also intend to create tangible and actionable changes, meeting the needs of financiers, investors and customers.

The principles are:

- **Usage/ management of premiums:** investing premiums paid by insureds into certified green asset classes, including new technology - for example plastic substitutes, fossil fuel replacements and waste-reduction process and solutions.
- **Process for insured/ project selection:** Working solely with brokers and insureds that become signatory organisations and support the HKGFA Green Insurance Principles (GIP); creating and supporting a HKGFA Green Insurance Ecosystem; and providing support for positive environmental and socially impactful activities and certified 'green' projects within a 'green economy'.

- **Business operations:** operations that are lean (create value for clients/ customers while also minimising waste), are energy efficient and reduce their carbon footprint and environmental impact.
- **Underwriting models:** insurers are required to factor 'climate change' and a 'carbon price' into their risk models. This can extend to the portfolio level to capture the sectors that generate environmental damage and those that pollute.
- **Product development:** creating dedicated insurance solutions and products that enable a shift to a low-carbon economy and new environmentally friendly technologies.
- **Financial reporting/ market disclosure:** the ability to report end-to-end business operations of insurers in compliance with the HKGFA Green Insurance ESG and Sustainable Development Goals frameworks.

STATISTICS

In 2018, the International Association of Insurance Supervisors issued a consultation paper on climate risks. It seems there is broad support from regulators and industry for ambitious programmes to mitigate climate risks. Insurance regulators around the world are beginning to take action.

The United Nations Environment Program Finance Initiative (UNEPFI) has created high level Principles for Sustainable Insurance (PSI), which now have 65 signatories.¹ More than 120 organisations worldwide have adopted the four PSI, including insurers representing more than 25% of world premium volume and \$14trn in assets under management. The principles are part of the insurance industry criteria of the Dow Jones Sustainability Indices and FTSE4Good.

We hope these principles will guide actions so that the insurance profession in Hong Kong and beyond can support the move towards a low-carbon economy

These four principles are:

1. We will embed in our decision-making ESG issues relevant to our insurance business.
2. We will work together with our clients and business partners to raise awareness of ESG issues, manage risk and develop solutions.
3. We will work together with governments, regulators and other key stakeholders to promote widespread action across society on ESG issues.
4. We will demonstrate accountability and transparency in regularly disclosing publicly our progress in implementing the principles.

The HKGFA and others are now working to create tangible, impactful changes within this broad framework.

By creating the GIP, the HKGFA and the Green Insurance Taskforce hope to support:

- The ability of clients to purchase green insurance policies that facilitate and fund the rebuilding of damaged property to conform to new energy efficient standards
- Specifying green insurance coverage for home solar and energy storage devices along with microgrids
- Targeted green sectors and green technologies for insurance coverage, such as the building and operation of new waste treatment plants, biogas and other small-scale renewable energy applications or recycling activities, and clean fuels for the transportation and maritime industries (biofuels, pyrolysis technology)

- Green energy shortfall insurance to protect the revenue of solar and wind projects
- Incentives for future green initiatives driven by technology or legislative change
- Promotion of green living with available insurance solutions for consumer lines of business.

We would encourage industry practitioners around the world to create and embed green insurance solutions and processes into their local markets and business operations.

UNEPFI is currently undertaking a consultation entitled: 'Underwriting environmental, social and governance risks in non-life insurance business'². According to the UNEPFI's working draft, climate change will have a 'potential high or direct risk' on most major insurance lines of business due to 'decarbonisation transition'. The same impact is also seen in major economic sectors such as agriculture and construction.

A CALL TO ACTION!

What can you do? Firstly, please check the PSI³ and lead the discussion within your teams to build awareness of the green insurance movement, focusing on your organisation's state of awareness and compatibility with the GIP. Begin to network - formally through organisations like the HKGFA, and informally within your markets. The more markets that support and implement the GIP, the faster we can make a positive impact and ensure the green finance ecosystem supports a low-carbon future. ▲

BUILDING TRUST: TECHNOLOGY

HOW TECHNOLOGY INNOVATION IS SUPPORTING LEARNERS WORLDWIDE

by **Simon Graham**
Former Learning and Assessment Director, Chartered Insurance Institute

and **Jackie Mahoney ACII**
Chartered Insurance Practitioner Learning Director, Chartered Insurance Institute

Digital learning and assessment means the CII no longer faces the ‘time and place’ constraints that, in the past, have limited our ability to provide high-quality learning across borders and timezones to anybody who can benefit from it.

DIGITAL LEARNING

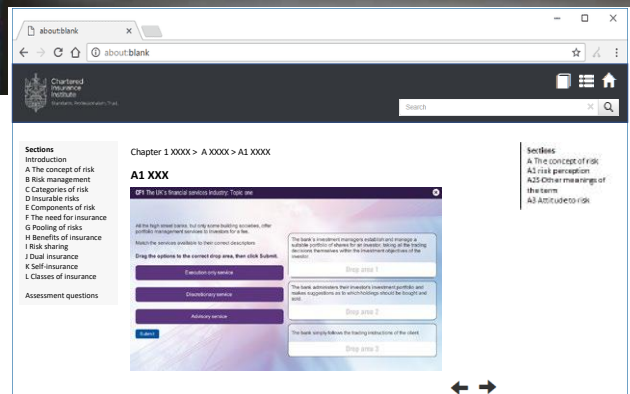

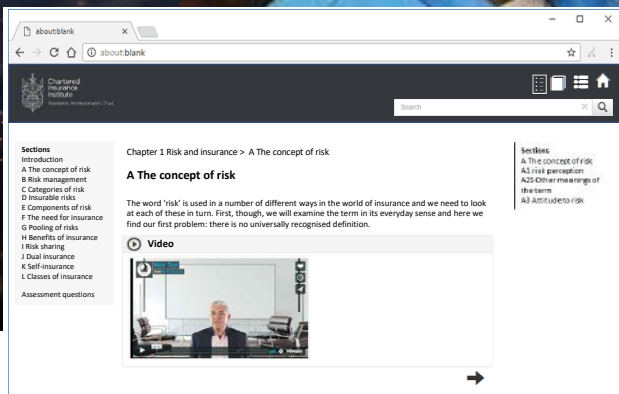

The ability to extend reach through digital delivery has been proven in many others sectors. In 2017, every minute of the day, Uber riders took 45k trips, Snapchat users shared 528k photos, YouTube users watched 4.1 million videos, Google conducted 3.6 million searches, and a remarkable 15 million texts were sent. This level of activity would’ve been impossible before technology revolutionised our lives. And it’s turning the experience of learning upside down. Through its online courses, Harvard University now educates more people every single year than have participated in its on-campus programmes throughout its 380-year history. Truly, we live in an era of open, democratic access.

Our vision at the CII is that learners will soon be able to access the content they need, in the format they prefer, using the device of their choice – regardless of where they live. All that’s needed is a broadband connection, and a wealth of up-to-date, immersive, engaging material is instantly available. The efficiency gain – both to the CII and to learners – will be remarkable. AIIM, a non-profit association serving the global community of information professionals, has estimated that poor content creation practices cause numerous pain points, with 85% citing avoidable “time spent searching” as a key issue.

Throughout 2019, we’ll be rolling out digital content to assist learners studying for our qualifications across a wide range of vital topics – including cyber risks, reinsurance, insurance and economics, the business of insurance, and “what it’s like to work in insurance”. This material will look very different from the CII’s historic printed study texts; instead, it will contain videos, animations, hyperlinks and much

Proctor U is the CII’s remote invigilation partner

Selected digital learning page layouts

more, to bring to life the raw textual information. The screenshots above should provide a flavour for how our content will appear as we increasingly include the most appropriate learning assets for each learning objective, using multi-device, responsive design.

REMOTE INVIGILATION

Of course, absorbing our materials is only the first part of the learning experience. Learners who seek a qualification from the CII need to be formally assessed, so we can satisfy ourselves that the required level of competence and knowledge has been attained. In the past, this has often been an expensive and time-consuming process for learners – especially those who are based outside the UK. It is often necessary to travel to an assessment centre, incurring significant travel expenses. This can mean learners arrive for exams and tests in a stressed state, having battled with transport delays and multiple other inconveniences when they should be getting mentally prepared for the assessment process.

In 2019, we will be offering remote invigilation in selected markets with our partner Proctor-U, an organisation whose mission is to be: “The go-to source for online identity and exam integrity.” In 2018, Proctor-U has demonstrated its credentials in numerous markets and sectors, proctoring 1.18 million exams in the first 10 months.

But what, exactly, is remote invigilation? Simply put, it’s when the experience of sitting an exam in a physical test centre is recreated outside a formal exam venue in an online environment. The candidate simply connects to a live invigilator from a location of their choice; the invigilator undertakes the necessary

checks and continues to monitor the candidate for the duration of the exam. At the conclusion, results are provided immediately.

In 2018, we have undertaken extensive preparations for the introduction of remote invigilation. We surveyed our customers – some 95% of non-UK learners stated they would ‘prefer to sit an exam by remote invigilation instead of at an exam centre’, primarily due to the additional flexibility and savings on travel costs. Comments that were made were overwhelmingly positive and included:

“Will definitely save a lot of time and money. I spent the equivalent of £600 on hotel bills and airfare to sit FIT in Freetown

“The added flexibility in when a candidate can sit an exam will open many doors. The strict sitting of twice a year is a deterrent

We remain on a journey to becoming a fully ‘digital first’ professional body. But we are determined to maintain the momentum. The major online brands have raised the expectations of every single one of us about what ‘convenience’, ‘flexibility’, ‘instant access’ and ‘personalisation’ means in practice.

We hope that, once ‘digital learning’ and ‘remote invigilation’ have been brought to market – as well as many other initiatives that are currently undergoing scoping – the CII will be better able to build public trust in markets in all continents and both hemispheres. ▲

SPOTLIGHT ON: OTHER PROFESSIONS

INTERNATIONAL PRIORITIES FOR THE LAW SOCIETY OF ENGLAND AND WALES

by Mickaël Laurans

Head of International, The Law Society of England and Wales

The first of a continuing series in which we invite other professional bodies to provide an insight into the international priorities shaping their future.

The legal profession in England and Wales¹ has always displayed a strongly international outlook. For historic reasons, many countries across the continents adopted English common law and statute law as the basis for a functioning jurisdiction. These practices have stood the test of time, even as countries achieved independence from British rule and started developing their court and appeal systems in different ways. For example, legal developments in England are often incorporated by jurisdictions that have kept to the common law.

International influence is further bolstered by the global reputation of England and Wales' judiciary and legal professionals, which are widely regarded as upholding high standards in their expertise, conduct and practices. Many parties will come to England and Wales to settle disputes – using both arbitration or litigation – regardless of where contracts were origi-

nally written. It has been estimated that 70% of cases in front of London's Business and Property Courts in Fetter Lane involve at least one party from outside the UK.

In recent decades, this international profile has been further strengthened with the rise of global law firms. Although these organisations operate with a variety of business models (from a network of wholly-owned local offices to a looser federation), their headquarters are invariably located in either the UK or the US. Global customers of these firms will expect consistency of standards, and this means policies and practices will often be developed in head offices for international implementation.

These trends carry significant implications for how The Law Society supports members. While only about 3% of our members are physically based beyond these shores, almost all of them, at some point in the career, will be affected by international work – directly or indirectly. We have responded by creating an international team, employing 14 staff in London and five in Brussels, which pursues three priorities:

International influence is bolstered by the global reputation of England and Wales' judiciary and legal professionals

PUBLIC INTEREST: HUMAN RIGHTS AND THE RULE OF LAW

We are strong believers that a properly functioning legal system is one of the vital pillars for economic and social development. We work closely with international organisations (such as the European Union and the United Nations), international legal associations, foreign bars and governments to identify where the rule of law is under threat and help devise solutions.

In recent years, our work in this area has focused on three objectives: building legal capability in developing countries through funding and training, encouraging gender diversity within the profession, and intervening in situations where lawyers are at risk – for example, because their work places them in opposition to people in power. Our interventions in these areas can take a variety of forms – working behind the scenes, publishing reports, or organising roundtables or symposiums.

MARKET ACCESS AND PRACTICE RIGHTS

As noted, many individual lawyers and legal firms, while based in the UK, have an increasingly international outlook. They can only fulfil this role when the legal services market in question officially welcomes practitioners who obtained their qualifications in England and Wales.

An essential part of The Law Society's service is to lobby and influence policymakers in such markets to ensure our members can operate legally and without restraint. Of course, given the current fast-changing international political environment, this isn't simply a matter of identifying emerging markets with the potential to 'open up' With the rising threat of protectionism and the uncertainties posed by Brexit, we

also need to guard against countries that might newly impose obstacles and barriers. The other aspect of Brexit could, of course, be the possibility for the UK to strike free trade agreements in services that were not previously in place. Once again, we intend to promote the benefits to all concerned of ensuring legal services are at the forefront of such discussions.

BUSINESS DEVELOPMENT OPPORTUNITIES

The final strand of work is as a champion and enabler of business opportunities for our members, especially at firm level. In recent years, we have been instrumental in events in markets such as Russia and Mexico that showcase the expertise of The Law Society members and the strengths of English common law as a governing law of choice for international contracts. We also publish materials, sometimes translated into the relevant language, which promote how our members can do 'legal business' in specific jurisdictions and why the UK's 'global legal centre' can support public policy and business priorities around the world, such as on the Chinese Government's 'One Belt, One Road' programme of infrastructure projects along the old silk roads.

Africa is rising fast up the 'opportunities' list for the legal profession and will increasingly feature on The Law Society's agenda. We are currently exploring showcase events in a number of key African countries and, as I write this article, I'm at the airport about to embark on a 10-day visit to South Africa and neighbouring countries. Given the pace of change across the world, I can't be precise about what the next decade has in store for The Law Society. But I'm sure of one thing ... we'll certainly be busy! ▲

¹: Scotland and Northern Ireland have separate legal systems, and are out of scope for this article

MISSION AND VISION

The Insurance Institute of Kenya (IIK) is the umbrella body for insurance professionals in Kenya. It was formed in 1948 as an affiliate of the Chartered Insurance Institute in London. The institute exists to promote professional standards in Kenya by admitting qualified insurance professionals into the institute, ensuring that such members are continuously developed and uphold the set standards of professionalism and adhere to the code of conduct.

Mission: To enhance insurance professionalism through training, examination, certification and research.

Vision: To be Africa's leading insurance institute.

MISSION AND VISION

Mission: We lead our industry through professional standards and lifelong learning, which enable our members to achieve their career (and corporate) aspirations.

Vision: The platform for professionalism in insurance and finance.

ANZIIF is the leading education, training and member association for the insurance industry in Australia, New Zealand and the Asia-Pacific region. We have been providing technical insurance education and training for more than 135 years.

2019 ACTIVITIES

ANZIIF partners with companies, government and non-profit organisations to provide a range of services to support professional excellence; to enhance the standards, reputation and success of the industry; and to improve community understanding of insurance and finance. This includes: Formal education | Professional development | Events | Quarterly journal

Technical notes on Country Profiles:

- GDP data is shown in US dollars for ease of comparison
- When premium data is provided, this generally refers to 'gross premiums'
- Where combined professional body membership is shown in the Country Profiles, this is the simply arithmetical total; we have not investigated or adjusted for any members who may hold dual memberships.
